

Creating a High Score

Computer games will often keep a High Score, in order to challenge the player to try and do even better. Can you add a high score to your game?

Steps to Success for High Score

1. Create a New Variable for your High Score.
2. Create a new sequence for the **MAIN CHARACTER** that starts on the green flag and has a Forever and an IF.
3. The condition needs to ask IF the current Score is **GREATER** than the High Score.
4. If this is the case, High Score should then be set as the Current Score.
